

4-Way

Web Connector

> New Product Announcement

Among NUDURA®'s new innovations is our 4 Way Web Connector. This product gives the NUDURA® system extreme versatility in that we can now use any of our core thicknesses in combination with another to provide another size form. Should you require a 24" form, you can now achieve this with two 12" insert webs and a standard form panel. This goes for the rest of the core thickness in any combination. The 4 Way Web Connector is also useful for specific details such as integral pilasters or column details. By using panels and four insert webs you can achieve a column made entirely of NUDURA®.

Another useful area that this accessory can be very beneficial is in changing wall thicknesses around a corner. For example, if you need to go from a 12" wall to an 8" wall, the 4 Way Web connector will help provide the stabilization required for the pour.

The 4 Way Web Connector is made of extruded polystyrene. It is 1" in diameter and 14 ½" long.
